

COMMUNITY AWARENESS

Protect Florida From Hyperscale Data Centers

Educate. Organize. Protect Florida.

Across the country, enormous hyperscale data centers are being built near homes, farms, and natural areas. Now they are being proposed in Florida — and most residents have never been told what that means for their land, water, and power.

These are not ordinary buildings. A single campus can cover hundreds of acres and consume the electricity of tens of thousands of homes. Once approved, the impacts on a community are permanent.

WHAT EVERY FLORIDIAN SHOULD KNOW

- ✓ Hyperscale facilities can occupy hundreds of acres and run 24 hours a day, every day.
- ✓ They can require extraordinary amounts of electricity and, in many designs, large volumes of water for cooling.
- ✓ Decisions are often made quickly at the county level — before most residents even hear about them.
- ✓ County commissioners have the authority to say no. Escambia County already did.

You do not have to be an expert to make a difference. You just have to show up, ask questions, and tell your commissioners where you stand.

Learn the facts. Take action.

Everything you need is on our website.
